Education

Bachelor of Engineering in Computer Science	2023 - Present
<i>Bangalore Institute of Technology, Bengaluru</i>	<i>CGPA: 8.2/10</i>

Technical Skills

Frontend: HTML5, CSS3, JavaScript, TypeScript, React.js, Tailwind CSS, Vite

Backend: Node.js, Express.js

Databases: MongoDB, SQL

Programming Languages: Java, Python, C

Tools & Platforms: Git, GitHub, VS Code, Postman, Cloudinary, Zod, Vitest

Framework / Stack: MERN Stack (MongoDB, Express.js, React.js, Node.js)

Problem Solving: Proficient in Data Structures & Algorithms (DSA) with active problem-solving experience on LeetCode.

Projects

HireTrack ATS | React · TypeScript · Node.js · Express · MongoDB · JWT · RBAC · Zod · Cloudinary · Vitest [\[Live Demo\]](#) [\[GitHub\]](#)

- Architected a multi-tenant Applicant Tracking System (monorepo: React, TypeScript, Node.js, Express, MongoDB) with a 9-stage recruitment pipeline and strict RBAC across Admin, Recruiter, and Candidate roles
- Engineered a custom Evaluation Engine with distinct Technical (Pass/Reject) and HR scorecard reviews, plus Cloudinary-integrated resume uploads with inline PDF rendering
- Built a 33-test Vitest + Mongoose suite (100% coverage) with shared Zod validation schemas across client/server, plus MongoDB aggregation pipelines to auto-flag stale candidates

Job Tracker | MongoDB · Express.js · React 19 · Node.js · Tailwind CSS · JWT · Framer Motion [\[Live Demo\]](#) [\[GitHub\]](#)

- Engineered a production-grade MERN stack job application tracking system with JWT authentication, Helmet.js security headers, Joi server-side validation, and centralized error handling middleware
- Built a drag-and-drop Kanban board using @dnd-kit/core with both MouseSensor and TouchSensor support, implementing optimistic UI updates that instantly reflect status changes and revert on API failure
- Designed a real-time analytics dashboard using MongoDB aggregation pipelines (\$match + \$group) for live KPI cards with Framer Motion animations, plus server-side pagination and full-text search

Expense Tracker | MongoDB · Express.js · React 19 · Node.js · JWT · Recharts [\[Live Demo\]](#) | [\[GitHub\]](#)

- Developed a full-stack MERN application with JWT-based authentication, enabling secure per-user data isolation for income and expense management across protected REST API routes
- Built RESTful API (15+ endpoints) with Node.js + Express 5 for CRUD operations and monthly analytics aggregation; visualized data with Recharts (bar, pie, line) and deployed on Vercel with MongoDB Atlas
